Incident at Fueling Station in Carson, California

On Saturday, May 26, 2007, a SuperShuttle natural gas - - powered passenger van fuel tank apparently ruptured while being fueled at a station in Carson, California owned by the Los Angeles Department of Sanitation and operated by Clean Energy. The van driver, who was standing behind the vehicle, was killed as a result of the tank rupture and resulting rapid decompression of the contents of the tank. The gas released from the tank did not ignite. No other person was injured. The fueling station was not damaged and continues to operate.

News accounts of the incident reported that the driver's wife said that the van had recently been damaged in a rear end collision and had just been returned to service when the incident occurred. An investigation is underway to determine the exact cause of the incident.
